Project:
Guideline for BEVs in Underground Mining second edition

Technology platform addressed:

Diesel Mine

Electric Mine

Project Description

- Expand the 1st edition of the guideline for Battery Electric Vehicles (BEVs) in Underground Mining to include new information that has been learned and new technologies that have been developed
- Add a new operations section to provide recommendations for emergency response, operation and maintenance
- Add a recommendation for charger standardisation

Business Case

- BEVs allow for elimination of diesel while simultaneously reducing electricity use
- Elimination of diesel has significant health benefits
- Reduce the cost of adoption by sharing lessons learned
- Increase industry standardisation
