**Project:**  
*Short Interval Control Guideline*

**Technology platform addressed:**

Analog Mine

Digital Mine

**Project Description**

- Produce a guideline outlining the current best practices for short interval control (SIC)
- As the technologies involved are immature and changing rapidly this will not be a definitive “how-to”, but rather a presentation of options that can be considered.

**Business Case**

- Greater and faster adoption of SIC
- Lower cost implementation
- Many mining companies have implemented some aspects of SIC, and others are looking at doing so, but there is a lack of independent guidance on how to proceed.
