

Portfolio:
Underground Mining

Project:
Short Interval Control Workshops

Technology platform addressed:

Analog Mine

Digital Mine

Project Description

- A series of workshops to help operators learn and share information about short interval control (SIC)
- Two key elements to the workshops: operators sharing information between each other about what they have done, what worked, and what didn't, and selected technology companies presenting to the operators about their solutions.

Consortium Members

- N/A

Next Steps

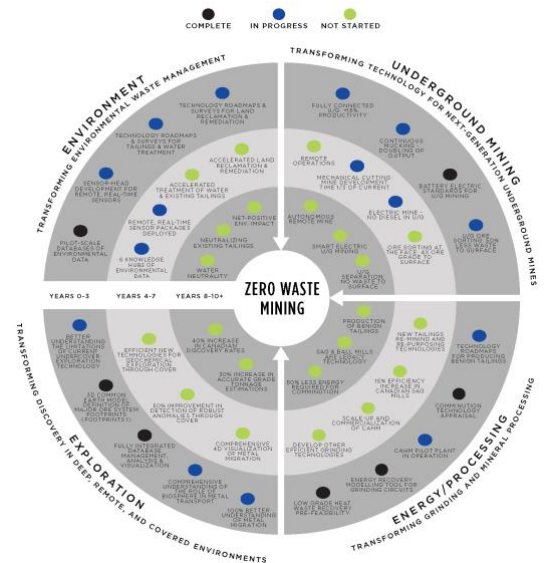

- Identify if there is a desire for future workshops

Business Case

- Many mining companies have implemented some aspects of SIC, and others are looking at doing so, but there is a lack of knowledge of what products and services are available to help them as they follow down this path.
